Financial Partners Limited (Business Registration No. 09451278) has its registered office at 601 Prince's Building, Chater Road, Central, Hong Kong.

Financial Partners Limited is authorised and regulated by the following regulatory bodies:

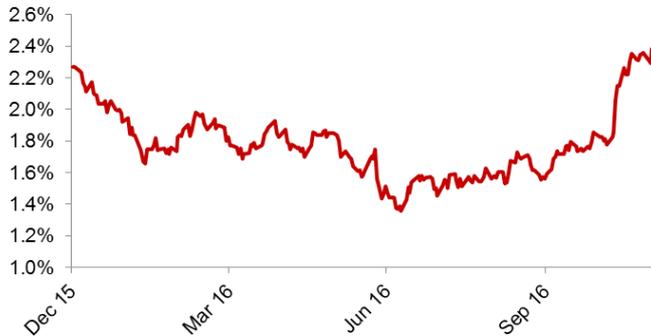

*The Hong Kong Securities and Futures Commission Ce No. AAG749
Hong Kong Confederation of Insurance Brokers Reg No. 0145
The Hong Kong Mandatory Provident Fund Schemes Authority Reg No. IC000614*

Market Commentary

A year that witnessed political power ebb away from centrist politics and towards fringe populism and nationalistic ideologies culminated in the election of Donald Trump - the Republican Party's far-right, nationalistic, anti-trade and immigration, property mogul nominee. His triumph over Democrat Hilary Clinton, who many saw as the encapsulation of the political establishment, reflected the electorate's disenchantment with such politicians and the inequality that has resulted from their pro-trade and immigration policies of the past decade

Financial market reactions to the result went largely against consensus predictions of what a Trump win might mean. Instead of a risk-off reaction and rush to safe-haven assets, quite the opposite materialised as investors focused on the potentially positive implications of the result. The strength of Trump's mandate, and his campaign rhetoric that referenced increased infrastructure and defense spending, significant income and corporate tax cuts, and deregulation across the finance and healthcare industries suggests that fiscal spending will be materially higher and policy more expansionary. This should in turn underpin growth in the US. On the back of such hopes, US equity markets climbed up 1.6% in the week following his victory, and the momentum continued over the month as markets shrugged off anti-trade rhetoric and a continuing commitment to build a wall on the border with Mexico. Indeed over November, the S&P index gained 3.6%, and the week commencing the 21st November saw the four major US equity indices (the S&P, Dow Jones, Nasdaq Composite and Russell 2000) all hit record highs. The story was similar globally, as developed market equities gained 1.4% over the month.

Figure 1: US 10Y Treasury Yields have now risen year-to-date

If developed market equity markets were major winners post the election, then the losers were emerging markets and fixed income. Fears over the impact of Trump's nationalist stance on trade between emerging economies and the US resulted in emerging market equities losing 4.6% over the month. Their currencies fared a little better, as the JPM Emerging Market currencies index, a barometer of the value of all emerging market currencies' against the US dollar, fell 4.4% over the same period. None fared worse than the Mexican Peso, however, which saw its value, which had become a somewhat perverse proxy for Trump's chances of victory, fall by up to 14.3% immediately following the result. Meanwhile, bonds sold off due to medium term predictions that Trump's aggressive policies would spark higher inflation and increase the US budget deficit – resulting in a US base interest rate rise becoming a near certainty. From the election to the end of the month, yields on US 10-year Treasury Bonds remarkably rose 53 basis points to 2.38%, their highest level since July 2015, while global government and corporate bond prices fell 1.7% and 3.0% respectively. Commodities were also impacted, most notably gold, the value of which is inversely related to that of the US dollar (which gained 3.1% over the month). As such the metal, which many had thought would provide an effective hedge in the case of a Trump victory, suffered, falling 8.1% to USD 1173.20 per ounce.

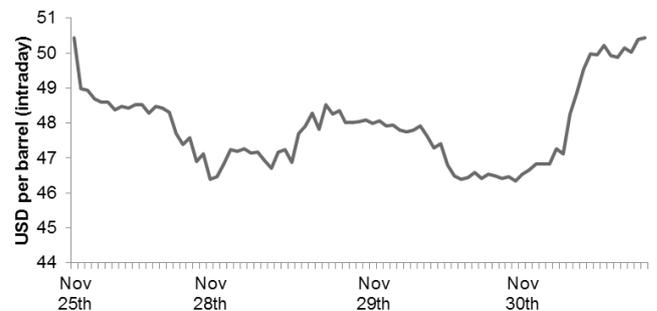

Figure 2: Dollar value rises, leaving EM currencies in the dust

Away from Trump but staying with commodities: oil prices, which had taken a backseat for most of the month, rocketed by 8.8% to USD 50.47 per barrel on the last day of November as OPEC (the Organization of Petroleum Exporting Countries, who collectively account for a third of the world's oil supply), announced that they had reached an agreement to cut oil production by 1.2 million barrels a day as of January 2017. It was the first agreement of its kind since 2008, reflecting the desire of many oil producing countries to raise the price of oil and halt the erosive impact that low prices have on their budgets.

Figure 3: Brent crude oil prices jump following OPEC agreement

Moving into December and setting our sights on next year, it seems likely that uncertainty surrounding the future direction of US policy is likely to result in heightened market volatility for some time to come. We would not recommend selling into this volatility. We are outcome based investment managers, constructing well diversified portfolios in order to minimise the potential detrimental impact that specific global events could have on returns, in order to help clients stay invested. While some asset classes will no doubt be adversely impacted by the global trend of political disaffection and anti-globalisation, other asset classes, as we have seen, are likely to offer offsetting benefits. As always, we continuously aim to utilise opportunities to increase exposure to asset classes that are unfairly punished by risk events in striving to increase the long-term financial wellness of our clients, whilst making their journey to that outcome as palatable as possible.
