Financial Partners Limited (Business Registration No. 09451278) has its registered office at 601 Prince's Building, Chater Road, Central, Hong Kong.

*Financial Partners Limited is authorised and regulated by the following regulatory bodies:
The Hong Kong Securities and Futures Commission Ce No. AAG749
Hong Kong Confederation of Insurance Brokers Reg No. 0145
The Hong Kong Mandatory Provident Fund Schemes Authority Reg No. IC000614*

Market Commentary

In the worst start to a year since the financial crisis, and one of the worst on record, equity markets plunged in January. Despite a sizeable rally in the final days of the month, global equities fell by 6.0% and emerging equity markets were down by 6.5%. Falls were led by China, down over 20%, and a number of European markets.

Figure 1: Global equities over 6 months.

The second half of 2015 saw various factors driving uncertainty across markets, including weakness in China, the collapse in the oil price, the sharp emerging market downturn and the negative impact of the strong dollar. While these continued to reverberate in January, the market's attention shifted to the potential impact of these negative influences on global growth and inflation. There is clear and growing evidence of a slowdown across the developed world, especially in manufacturing and in the US, alongside deflationary forces and increasingly tough competitive conditions. This spilled over into the credit markets, where spreads have widened materially over the month, and into concerns about rising defaults: not just in the beleaguered oil sector but more widely across the corporate sector. In turn

this affected financial stocks globally; banks are under pressure, especially in Europe, from profitability concerns in a zero interest rate world with deteriorating credit conditions. Despite the headline focus on oil and commodities, the weakest equity sector so far this year has been Financials, down over 16% at time of writing.

Figure 2: High yield spreads over past 12 months.

In China, news continued to point to a slowing economy. Growth in Q4 2015 came in at 6.8%, while the annual growth in 2015 of 6.9% was the lowest for 25 years. Moreover, deflationary forces prevailed, with the Producer Price Index -5.9%, falling for the 48th consecutive month. The economic competence of the Chinese authorities continues to be called into question, with the markets fearing a competitive devaluation of the renminbi should the unsustainable level of support the Chinese administration is throwing at the currency be withdrawn. In the developed world, the spill-over of slower growth from China and negative growth in emerging markets has been exacerbated by the collapse in spending by oil and commodity companies. Although data outside the industrials sector has been more mixed, the trend appears to be for a weakening of growth; US GDP growth slipped to 0.7% in Q4 2015.

Figure 3: Producer Price Indices over 5 years.

Central banks have become increasingly dovish against this macro-economic backdrop. The Bank of Japan surprised investors with a cut in its deposit rate to take it to -0.10%: the first time in the Bank's 150 year history that it has taken the rate into negative territory. The Bank of England, while not formally easing policy, indicated that its earlier plans to replicate the US rate increase at the turn of the year has been pushed into 2017. This leaves the US Federal Reserve in a dilemma. Having raised rates in December, it has seen increasing evidence of a slowdown and tighter financial conditions across the developed world, and therefore despite originally flagging four rate rises in 2016, it now seems likely that we won't see the next rate rise until 2017. Ten year bond yields have fallen by 0.55 percentage points in the US and UK, and some \$7 trillion of the world's government debt is now offering negative yields, a wholly unprecedented situation.

As things stand, we believe that fears over global growth and concerns over the strength of the financial system are starting to look overdone. The global economy has softened but is still growing, central banks have become more accommodating and the fall in energy and other commodity prices, which to date has had a material negative impact on the global economy, will begin to show through in higher consumer incomes and spending as the year progresses. While the risks to the financial system are not to be dismissed, banks across the world are in a much stronger capital position than they were before the global financial crisis, and in the first weeks of 2016 bond and equity markets appear to have re-priced for these risks very quickly. Predicting when sentiment will turn is impossible, and given the prevailing nervousness of investors, risks of further falls in markets cannot be ruled out. Positive factors such as the boost to consumer spending to come from lower oil prices and the continuation of low interest rates are welcome and complement the now attractive valuations. We remain in a challenging environment where returns are likely to be subdued and markets volatile, but against a background of low yet steady growth in the developed world, the weakness over the past nine months has taken many markets back to levels last seen in 2013: this represents a good opportunity to add to equity positions.
