Momentum Global Investment Management (Company Registration No. 3733094) has its registered office at The Rex Building, 62 Queen Street, London, EC4R 1EB.

Momentum Global Investment Management Limited is authorised and regulated by the Financial Conduct Authority in the United Kingdom, and is an authorised Financial Services Provider pursuant to the Financial Advisory and Intermediary Services Act 37 of 2002 in South Africa.

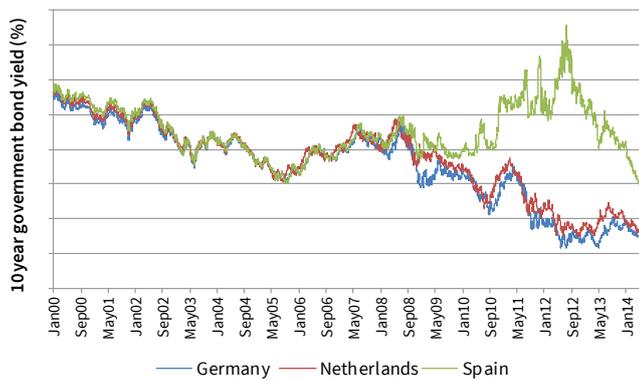

Market Commentary

Volatility remains remarkably low across markets, with most asset classes following an upward trend in May. Equities returned 1.4% in developed markets while emerging markets added 4.5% (both in US dollar terms), to move them marginally ahead of their developed counterparts for the year. An increasingly dovish tone from central banks followed news of generally sluggish, and in some cases, disappointing economic growth. This has resulted in expectations that interest rates will stay “lower for longer” providing further support for bond markets.

Indeed, fixed income returns were arguably the most noteworthy area of the markets last month. Despite the fact that yields had already fallen from the end of 2013 they fell further in May, resulting in government bonds returning over 1% in the US, UK and the euro area, to take their year-to-date returns to around 4% in their respective local currency.

Increasing concerns about secular stagnation, the prospect of monetary loosening in Europe and close to zero short term rates for a long time ahead, all combined to push bond yields across the euro area down. German 10 year yields fell close to 1.2% from circa 2% only six months ago. Elsewhere, yields on several European government bonds including Spain and the Netherlands fell to all time lows.

Figure 1: German, Dutch and Italian 10 year government bond yields

Aside from developed market government debt, the most notable moves were in emerging market debt, which returned 2.9%, continuing the sharp recovery from last year's sell-off. With a return of 8.4%, this has been one of the best performing asset classes to date in 2014. In contrast, high yield bonds fared less well, underperforming government debt, whereas investment grade credit matched the return from government paper in May.

The most important economic activity data came from the euro area, where first quarter growth registered a disappointing 0.2%. Excluding Germany, where the economy grew by 0.8%, output fell by 0.1%, with Italy's economy shrinking and France stagnating.

The news heightened expectations that the European Central Bank (ECB) would act to ease monetary policy at its meeting at the start of June. ECB President, Mario Draghi, duly unveiled a new package of measures. As expected, the deposit rate has been moved from zero to -0.1% (i.e. banks now have to pay the ECB on excess reserves parked at the Bank), and the main refinancing rate has been lowered from 0.25% to 0.15%. Perhaps more importantly, Draghi also introduced a programme to encourage lending to businesses – Targeted Long Term Refinancing Operations (TLTROs) – worth up to EUR 400 billion.

In the US, Q1 growth was revised down to -1.0%, well below consensus expectations. However, most of the weakness has been attributed to transitory factors, notably the severe winter weather and reduced inventory accumulation. Although the data since then have been mixed, the trend appears to be for improved growth in Q2 and beyond, with leading indicators and consumer confidence all pointing upwards.

As expected, Japan produced a strong first quarter growth print of 6.7% annualised, due to discretionary spending being brought forward ahead of the 1 April sales tax increase. In the immediate aftermath there has been a sharp drop-off in spending but anecdotal evidence from Japan suggests that fears of a sustained slump in activity levels are as yet unfounded.

China continues to provide cause for concern. Reports of increasingly widespread falls in property prices and distressed property developers have been circulating. This is somewhat unsurprising considering the credit tightening in China and the oversupply of property in a number of areas. Subdued activity has been reflected in low inflation, with producer prices falling by 2% year-on-year and consumer prices growing by only 1.8%.

As the ECB eases monetary policy, the US Federal Reserve (Fed) also remains dovish on interest rate policy. Although tapering is expected to continue through the remainder of 2014, Fed Chair Janet Yellen has made it clear that the Central Bank is planning to keep rates low for some considerable time to come. In a speech to the Joint Economic Committee of Congress she said that “a high degree of monetary accommodation remains warranted”, “labour conditions are far from satisfactory” and “inflation below target poses risks”.

Away from central banks, another key feature of the month was politics, with important elections in Europe, India and Ukraine, together with a military coup in Thailand. Elections to the European Parliament across the EU saw a notable swing across nearly all countries to anti-establishment, anti-EU, anti-euro, anti-austerity, and anti-immigration parties.

Although mainstream parties remain in the majority, there is no doubt that euro-sceptic and protest parties will influence policy making at both EU and individual country level.

In India, the BJP party led by Narendra Modi scored a resounding victory in the general election, with the biggest winning margin in 30 years and a clear mandate for pursuing reform, including a more business and market-friendly approach to policy. The Indian rupee and stock market soared by 10% in May, first on the prospect and then the reality of a change in power.

Despite the weak economic news of late, leading indicators are pointing to improved prospects for a steady pick up in the key US economy, and in Europe through the remainder of 2014. With the Federal Reserve's tapering and interest rate policy now well flagged and discounted in the markets, and its increasingly dovish tone about future interest rate rises (lower for longer), this bodes well for more economically sensitive asset classes, notwithstanding the challenges posed by a Chinese slowdown and/or a misstep from policymakers.
