*Financial Partners Limited (Business Registration No. 09451278) has its registered office at 601 Prince's Building, Chater Road, Central, Hong Kong.*

*Financial Partners Limited is authorised and regulated by the following regulatory bodies:*

*The Hong Kong Securities and Futures Commission Ce No. AAG749  
Hong Kong Confederation of Insurance Brokers Reg No. 0145  
The Hong Kong Mandatory Provident Fund Schemes Authority Reg No. IC000614*

## Market Commentary

By far the most significant development in the month was the change in expectations for a US Federal Reserve (Fed) interest rate hike in 2016. During May the probability of a rate rise for the June and July meetings increased from 12.0% and 26.1% at the start of the month to 24.0% and 52.9% at month end. Markets reacted fairly predictably to this development. The US dollar rallied sharply, reversing some of its weakness earlier in the year: the greenback was up by 2.9% against the euro and 4.0% versus the yen, as well as rallying against many emerging market currencies. The gold price fell 6.0% over the month in US dollar terms, giving back some of the sharp gains from early in the year. Industrial metal prices also reversed direction, notably iron ore which fell by 28.3%. Emerging market equities fell by 3.7% and EM debt declined by 0.2%, although both these falls came after sharp rallies in previous months. High yield bonds (flat over the month) continued to outperform government bonds, which were down 1.2% in US dollar terms. Yields on shorter-dated US Treasuries fell in the first half of the month but reversed direction following the release of the Fed's April meeting minutes, which struck a hawkish tone. Longer dated Treasuries were little changed. In contrast to Treasuries, European bond yields fell, with the European Central Bank being a major buyer. Perhaps surprisingly, developed market equities predominantly reacted with equanimity to a less dovish Fed and the increased likelihood of an early interest rate rise, with the US returning 1.7% for the month, Europe adding 2.4% and Japan rising by 2.6% in local currency terms; the UK was a notable exception, returning 0.2% in sterling terms. Returns from markets outside the US were trimmed by currency weakness versus the greenback however, such that the MSCI World index returned 0.6% for the month in US dollar terms.

Figure 1. US and German government bond yields, in April and May.

Although the Fed had indicated in December last year that they were targeting four incremental rate rises this year, weak global conditions in the early weeks of the year caused plans to be put on hold. However, continued improvement in the labour market and some evidence of a pick-up in wages, together with increased stability in financial markets, produced a marked change in the Fed's rhetoric. The mid-month release of the April Open Market Committee (FOMC) meeting minutes showed that the Fed were still contemplating a summer hike, and with the inflation rate hovering at 1.6% using the Fed's preferred measure, Fed governors indicated that a rate rise in either June or July was likely.

Figure 2. Expected probability of a Fed hike in July, over the year to date.

Source: Bloomberg. Returns in US dollars unless otherwise stated. May 2016.

Notably, at the time of writing, the expectations for hikes at the June and July meetings have lowered significantly to 0.0% and 15.7% respectively, due to the May non-farm payrolls report on 3 June of 38,000 jobs dramatically disappointing relative to expectations.

Figure 3. USD and GBP over may.

Arguably the biggest political risk of the first half of 2016, the UK EU membership referendum, is drawing nearer and until recently the remain camp had consistently polled ahead of those looking to leave the EU. Those advocating to remain have pursued a relentless campaign predicting significant economic damage should the UK leave, and had appeared to shift the polls towards staying in. Sterling reacted accordingly by strengthening against most currencies, other than the resurgent USD. However various polls thus far in June have showed the leave vote ahead, producing a wobble in sterling. The bookies, which are usually a better guide to election results than opinion polls, still show remain as the stronger side. The likelihood is the UK will remain in the EU, but the outcome is of course binary and position taking ahead of the result is particularly risky. While nothing would change for some time after the vote whatever the outcome, a vote to stay in would probably see a short relief rally in markets. Conversely a vote to leave would see markets stumble and sterling take a meaningful dip, before stabilising at somewhat lower levels. In the longer term the UK will undoubtedly perform well whether in or out of the EU, and any sharp falls in markets over the next few weeks are likely to prove to be a good long term opportunity to accumulate holdings.

Markets recovered strongly after the sharp falls in January and early February, and have now consolidated in the past few weeks. On top of continuing uncertainty in the global economy, there is increased risk of another interest rate rise in the US this summer. On balance a June rate rise is, now, very unlikely in our view, as the economy continues to show a mixed picture. Longer term inflation expectations remain anchored around 1.5% and the Fed will want to see this move higher. All eyes will be on the data and the Fed as the year progresses. On a positive

note, economies continue to grow, albeit modestly; emerging markets are five years through the down cycle and offer recovery prospects from these levels; and a damaging surge in inflation seems a distant prospect. With competing forces influencing markets it is likely that the volatility we have witnessed in the first quarter of this year will be a feature in the months if not years ahead. Against this background, in the shorter term a period of consolidation and drift in markets is likely, but further upward progress is expected over the next 12-18 months.

## Market Performance
