Financial Partners Limited (Business Registration No. 09451278) has its registered office at 601 Prince's Building, Chater Road, Central, Hong Kong.

Financial Partners Limited is authorised and regulated by the following regulatory bodies:

The Hong Kong Securities and Futures Commission Ce No. AAG749
Hong Kong Confederation of Insurance Brokers Reg No. 0145
The Hong Kong Mandatory Provident Fund Schemes Authority Reg No. IC000614

Market Commentary

The benign conditions that have prevailed in markets through the past six months continued into May, with most risk assets producing positive returns. Equity markets again produced the best returns, led by the UK, Europe (especially peripheral markets) and Asia, but bond markets also made solid progress, as yields drifted lower and credit benefitted from a favourable corporate backdrop. Perhaps the most notable features, however, were a further slide in the US dollar, which fell 2.2% in May on a trade weighted basis, taking its fall to 6.1% from its early January peak and reversing all of the post-election surge; as well as a further drop in the oil price in the face of stubbornly high global inventory levels and evidence of surging oil shale production in the US. Also notable was the continuation of extraordinarily low levels of volatility across markets, with the VIX 'fear' index hovering at ten year lows, punctuated only very briefly in May by concerns that the Russia/Trump scandal could lead to a further weakening of the President and his ability to implement some of his reflationary and business friendly policies and even lead to his impeachment.

Figure 1: USD sacrifices its post-election gains

The MSCI World index returned +2.1% in May, with all regions participating on the rise but the US again underperforming other major markets. Emerging markets rose 3.0% driven almost entirely

by Asia, as other large markets including Brazil (corruption scandal surrounding the President) and Russia (hit by the decline in the oil price) suffered sharp falls. The favourable global economic backdrop was again the main support to markets, with Europe and Japan continuing to surprise on the upside in terms of data releases while in the US the trend has been more subdued, although still pointing to reasonable growth this year. In both the Eurozone and Japan Q1 GDP grew by 0.5% quarter-on-quarter, and leading indicators point to further strength in Q2.

Of more concern has been evidence of softer growth in China after a strong start to the year, with weak trade data and leading indicators, the authorities have been taking measures to curb a property bubble, tighten credit, rein in off balance sheet lending by banks and control the burgeoning debt mountain. A downgrade of China's sovereign credit rating by Moody's highlighted the risks surrounding the unprecedented surge in debt over the past decade. The prospects of weaker growth in China and concerns about the ability of the authorities to rein in excess credit while maintaining a 6%+ growth rate contributed to weaker commodity prices, notably industrial metals: the iron ore price fell 13.9% in May, taking its fall since mid-February to 34.8%.

Politics has remained at the forefront of investor attention. In Europe the election of a centrist and firmly pro-EU President, Macron has given confidence that the worst political fears of an EU break-up are receding and, with growth picking up, the euro has risen a further 3.2% versus the US dollar, taking its year-to-date gain to 6.9%. In the US, the unpredictability of President Trump, together with an administration which is looking increasingly dysfunctional, has gone a long way to deflate the Trump reflation agenda. A draft budget released by Mr Trump contained bold spending and tax initiatives but was widely seen as lacking either credibility or support to have any realistic chance of being passed by Congress. In the UK the expectation that the ruling Conservative party would be reinstated with a landslide majority has dissipated in recent days as a relatively understated campaign by Prime Minister Theresa May has been overshadowed by a surge in support for opposition leader Jeremy Corbyn. Although the Conservatives are still expected to win the election on June 8th, and markets are in no way pricing in any other outcome, the risk is that a small majority would seriously weaken the PM both domestically and in the critical negotiations to come with the EU over the terms of Brexit.

Figure 2: Sterling falters as Labour chase Tory lead

Despite the pick-up in global growth this year and rising employment levels inflation has remained remarkably subdued. Weak oil prices are helping to keep headline rates low while core inflation remains at levels which continue to give central banks caution in tightening policy. There still seems little prospect of any tightening in the EU, at least until later this year when a further tapering of asset purchases is likely, or in Japan and the UK, where fears of an economic slowdown as Brexit looms remain paramount. In the US the Federal Reserve (Fed) is widely expected to raise rates for a fourth time in this cycle at its June meeting but its pace of tightening will be cautious and will depend on continuing growth in the economy and employment. Bond markets have reacted favourably with bond yields on major markets falling significantly from their March peaks: in the US the 10 year Treasury yield has fallen by 40 basis points to 2.1%, its lowest level for the year. Credit has continued to outperform safe haven government bonds, with high yield bonds returning 4.8% so far this year and investment grade credit 3.5%.

Figure 3: Good month for G7 government bonds

Markets have performed well this year on the back of higher global growth. However valuations have been pushed higher, especially in the US, and are becoming vulnerable to disappointments. Policy uncertainties remain high and China's debt levels remain a source of considerable uncertainty and risk for investors. This leaves markets vulnerable to a correction and the long period of subdued volatility we have enjoyed over the past few months will surely be tested before too long.

However this cycle is particularly long and it will be important to stay invested, anything less is likely to lead to disappointment. Opportunities for returns outweigh the risks and we expect equities to continue to outperform bonds through 2017, so periodic bouts of weakness in equity markets will present buying opportunities.
