Momentum Global Investment Management (Company Registration No. 3733094) has its registered office at The Rex Building, 62 Queen Street, London, EC4R 1EB.

Momentum Global Investment Management Limited is authorised and regulated by the Financial Conduct Authority in the United Kingdom, and is an authorised Financial Services Provider pursuant to the Financial Advisory and Intermediary Services Act 37 of 2002 in South Africa.

Market Commentary

Following the steep falls in markets in August and September, there was a sharp recovery in October, with global equity markets up by 7.9% and the riskier parts of the fixed income markets including high yield bonds, emerging market debt and convertible bonds all up by 3-4%. In contrast, yields on safe-haven government bonds in the US and UK edged up, resulting in negative returns from this asset class over the month.

With investors taking advantage of better valuations, as well as the European Central Bank (ECB) clearly indicating that it is prepared to loosen policy even further at its December meeting, risk assets had their best month since October 2011. Even commodities which had been at the epicentre of recent declines managed a modest, albeit unconvincing, recovery in October.

Figure 1: Risk assets rally in October

China's third quarter growth registered 6.9%, a touch below the administration's target of 7.0%, and within a few days of the announcement, the People's Bank of China used it as a signal to loosen policy further, with its sixth interest rate cut in the past year. At the same time it eased banks' reserve requirements, which in turn should inject additional liquidity into the economy.

In Europe the ECB, although it kept policy on hold at its October meeting, surprised investors with a dovish statement from President Mario Draghi. Mr Draghi gave a clear signal that if data on the economy and inflation remain subdued, further loosening at the December meeting is likely. This could include a further cut in the policy rate (which is already negative) and an extension of the central bank's Quantitative Easing programme, both in terms of duration and range of assets purchased. Asset prices across the euro area responded enthusiastically, pushing bond yields still lower. German government bonds now offer negative yields out to six years.

Despite Mr Draghi's statement, all eyes remain on the Federal Reserve (Fed) in the US. Against a backdrop of mixed signals from the economy and core inflation remaining well below the Fed's target of 2%, the Fed kept policy on hold in October, as widely expected. Expectations for a rate rise this year have diminished considerably over the course of the past 12 months, but Fed Chair Janet Yellen was unexpectedly hawkish in her post meeting statement, raising the probability a rate hike in December.

Figure 2: Federal funds rate remains at historic lows

If data releases remain broadly positive, the Fed is expected to continue preparing markets for the first rate rise in almost 10 years. So far markets have remained largely unmoved by

the Fed's more hawkish tone and the impact of such a rise, expecting the process of normalisation to be very gradual. The only assets to have been notably impacted by the more immediate prospect of policy tightening have been gold, trading back down towards the \$1,100 level; US Treasuries, where yields have risen, especially at the shorter end of the curve; and the dollar, which has continued to firm, notably against the euro.

Figure 3: Short-end Treasury yields and the dollar spike

While the timing of the Fed's first rate rise is a concern for markets currently, we have always argued that it is the extent of the tightening in this cycle, and not the timing of the first move, that will be critical for markets over the next few years. On that score, we firmly believe that rates will move up only very gradually and will peak at levels well below those reached in previous cycles. As we know from the Fed's statements, policy decisions will be data dependent, and given the fragility of the global economy, the continuing debt overhang, the sharp slowdown in growth in developing countries and the powerful deflationary forces across the world, there is no question that the US central bank will be extremely cautious.

Having bounced sharply from the big sell-off in August and September, markets might well pause for a time, with the prospect of some nervousness likely as the Fed's December 16 decision approaches. Ahead of that, we will probably see the dollar remaining firm, bond yields edging higher and markets generally reacting to every piece of data that might give guidance to the Fed's decision. But putting aside this short term 'noise' we believe that markets are set to make modest upward progress next year, following a period of sideways trading and bouts of heightened volatility since the middle of 2014.
