

# Staying invested

## Weekly Digest

9 April 2018

– Andrew Hardy (CFA)

We regularly mention our goal of ‘keeping clients invested’, but what do we mean by this? It comes down to trying to overcome the biggest obstacle preventing investors from achieving long term objectives - themselves! We are all prone to mental pitfalls which make us our own worst enemy when it comes to investing. Understanding the many behavioural risks is a valuable step in the right direction but we can never eliminate the biases.

DALBAR, Inc.\* provide some sobering statistics around the impact of investor behaviour on returns. They estimate outcomes for the average equity investor by collating 30 years of data on subscriptions, redemptions and returns across all US mutual funds. The conclusion? Investors earned an average return of 3.66% per annum over the 30 year period ending December 2015, compared to the S&P 500 return of 10.35% per annum!

Several factors contribute to this outcome, including the impact of fees, other expenses, cash needs and differences in portfolio composition. However, by far the most significant driver appears to be voluntary investor behaviour and although the magnitude of the shortfall is astonishing, the underperformance makes sense. We know investors tend to pile in around market peaks and then get shaken out at the lows - equity funds saw huge inflows around the highs of the year 2000 and massive outflows around 2008 during the financial crisis, for example. The DALBAR statistics capture the effect this has on returns. The odds seem to be always against investors - average investor returns were lower than equity indices for 22 of those 30 years.

This suggests that investors tend to make irrational investment decisions, driven by herd instincts and the

emotions of greed and fear. They aim to buy low and sell high but evidence suggests that most do not practice this. Timing markets is extremely difficult and missing upswings can have a huge impact on long term returns; for example JP Morgan calculated that missing only the best ten days over the last twenty years reduces UK equity market returns from 6.3% per annum to 2.8% per annum.\*\*

The best defence is to avoid trying to time markets and instead increase one’s time horizon as far as possible. This can be difficult given the nature of modern media, the typical economic and market debates and the structure of the finance industry, all of which leads to a short term focus. Remembering that the odds are in your favour should make the task considerably easier though; in Jeremy Siegel’s book “Stocks for the Long Run” he notes that one dollar invested in US equities in 1801 would be worth a million dollars in 2014, a return of over 7% a year above inflation.

For investment managers it is one of the stated aims to keep clients invested. Portfolio managers think the best way they achieve this is through reducing the volatility of returns. Risk for investors is the probability of not achieving their specific investment outcomes, not volatility, but volatility is the factor that is most likely to precipitate irrational decisions. Portfolio managers seek to smooth the journey for investors through careful diversification and detailed due diligence on all investment decisions. By offering a range of risk profiled portfolios we also enable investors to select a portfolio that is appropriate for their objectives and circumstances.

\* The 22nd Annual Quantitative Analysis of Investor Behavior.

\*\* JP Morgan Asset Management Guide to the Markets, Q2 2018.

## The Marketplace

- Brent crude fell 4.2% to \$66.95 per barrel
- Gold rose 0.3% to 1,331.5 an ounce
- Global markets are optimistic that a trade war can be averted
- Volatility-linked securities outperform all others

## Market Focus

### US

- The Dow Jones was down 0.7% to end the week at 23,932
- US payrolls rose to 103,000 versus an estimated 185,000. Jobless rate remained at 4.1% pointing to a sustainable jobs market in line with projected further rate hikes
- The Nasdaq 100 fell 2.3% to 6,433
- Spotify makes its stock market debut, valued at ~\$27 billion
- The S&P 500 index fell 1.4% to 2,604.5.

### UK

- The UK services index dropped the most in nearly two years with expansion standing at 0.3% compared with 0.4% at the end of 2017. Bad weather and economic uncertainty were the driving factors

- The UK Composite PMI fell below expectations at 52.5 versus 54
- The FTSE 100 rose 2% to 7,183.

### Europe

- Eurozone inflation data forecast at 1.4% in March, up from 1.2%
- Euro Area unemployment 8.5% in February is the lowest since December 2008, overall EU unemployment at 7.1%, the lowest since September 2008
- The Euro Stoxx 50 index rose 2% to 3408
- U.S sanctions hit Russian tycoons with Rusal and En+ among the big names hit.

### Asia

- China will respond to any tariffs imposed by the U.S. against alleged violations of intellectual property rights with the same scale and intensity, said its U.S. ambassador Cui Tiankai. This could amount to as much as 25% on 106 different US products
- The Hang Seng index rose 0.5% to 30,229
- The Nikkei 225 rose 0.5% to 21,567.
